

## DATA CENTRE MANAGEMENT with DIAXION

### DATA CENTRE SERVICES

Defining a Data Centre strategy and understanding the impact of that strategy across the IT operation, resourcing, network, storage, vendor support contracts and monitoring are critical aspects to every business and its alignment with IT. Diaxon has experience assisting businesses of all sizes throughout Asia, Australia, Europe and US to align the business and IT division's strategies, requirements and budget to bring to fruition new or revitalised data centres. • **Data Centre Strategy development / Quality Assurance**

### EXISTING DATA CENTRES

Upgrading or migrating a data centre requires many layers of planning with many potential pitfalls and points of failure. It requires interacting with numerous disciplines including building construction, power, networking, redundancy, cooling, service requirements, security, servers, storage, applications, business strategy/requirements and so on, and then to manage any resulting problems or issues. • **Data Centre audit and documentation services • Data Centre capacity planning • Data Centre redesign**

### BUILDING & HOSTING

Diaxon's experienced team has the required skill sets, the deep experience and the vendor neutrality that can make the build of your Data Centre a low risk project, can optimise your new data centre design and save you money. Diaxon's consulting services cover the entire raft of data centre requirement analysis and design and address the complete lifecycle of a solution. • **Assistance with Data Centre requirements • Alignment to business strategy • Contract and SLA definition / negotiation for third partner hosted data centre space • Data Centre design • Due diligence review of requirements • Project plan / management and migration design**
